EDUCATION

York University

Honours B.Sc., Computer Science

Toronto, ON

Expected May 2027

– *Relevant Coursework:* Object-Oriented Programming, Data Structures & Algorithms, Database Systems

EXPERIENCE

IT Analyst (Co-op)

Toronto, ON

Metergy Solutions

Jan 2026 – Present

- Developed defensive **PowerShell scripts** to automate software deployment, system verification, and configuration tasks across enterprise Windows environments.
- Built an automated **Microsoft 365 deployment workflow** that downloaded, installed, and validated standardized Office applications, reducing repetitive manual setup work for technicians.
- Integrated the **Lenovo warranty API** with PowerShell to retrieve hardware lifecycle data by serial number, parse JSON responses, and export structured records for asset and compliance reporting.
- Supported endpoint administration by standardizing device diagnostics, asset catalog updates, and troubleshooting procedures across multiple business systems.
- Designed an **ITSM workboard** to organize incident queues, prioritize ticket tiers, document handoff procedures, and improve visibility into service-desk backlogs.

Program Mentor (Co-op)

Toronto, ON

K2i Academy — Lassonde School of Engineering

May 2025 – Aug 2025

- Mentored **8 laboratory assistants** applying quality-assurance and testing practices during accessible AI software research activities.
- Designed and delivered a **6-hour STEM learning sequence** covering the Engineering Design Process, embedded systems, and micro:bit programming.
- Guided students through hands-on coding and engineering challenges while translating technical concepts into clear, accessible instruction.
- Aligned project objectives with the **United Nations Sustainable Development Goals**, connecting software development activities to real-world social impact.

HACKATHONS

Dash2Dorm — Hack the 6ix 2025 | React (Vite), Flask, Stripe, Supabase, Leaflet, Vellum

Jul 2025

- Campus delivery app matching student couriers to orders; AI + weather signals optimize speed and cost.
- Transparent pricing: no menu markups; \$0.60 platform fee + \$2 base courier fee.
- Dynamic pricing via **Vellum.ai (Gemini)** with live weather from **Open-Meteo**; interactive routing on **Leaflet**.
- Hybrid routing (greedy + 2opt) improves efficiency by **10–15%** (+2–3 deliveries/shift); payments/data on **Stripe/Supabase**.

PROJECTS

OpsFlow — Bash Automation Pipeline Toolkit | Bash, Linux, Git, REST APIs

2025 – Present

- Designed a production-style automation toolkit in **Bash** to standardize pipeline execution (setup → run → validate → report) across environments.
- Wrote robust **Bash scripts** with strict mode, structured logging, exit-code discipline, retries, and clear failure messaging to prevent silent errors.
- Built log parsing + health checks using **grep/sed/awk** to flag error patterns, summarize root causes, and surface failures quickly for human review.
- Added scheduling and repeatability using **cron/systemd** patterns; converted manual runbooks into repeatable scripts and documented usage for teammates.

TECHNICAL SKILLS

Languages: Bash/Unix Shell, Python, Java, SQL, C, C++, JavaScript, TypeScript, HTML/CSS, R

Bash Tooling: **grep, sed, awk, find, xargs, ssh/scp, rsync, cron, systemd** basics, log parsing, exit codes

Testing & Tools: Git/GitHub, Jira, Confluence, TestRail, Charles Proxy, API testing, regression testing

Systems: Linux/UNIX, Windows; scripting for automation, environment setup, and repeatable pipelines
